

Disclaimer

The information presented in this manual is intended as a guideline only. Every effort has been made to present this information as accurately as possible as of the time of printing or electronic distribution based upon the experience of the authors, other members of the Building Biology® profession, and the building trade. However, as explained in the Editor's Note on page xviii, because this pre-publication draft version has not been 100% completed by the authors or the editor, nor reviewed by all the experts on our list, we cannot yet vouch for the truthfulness of all contents to the high level to which we aspire.

Competent architects, builders, subcontractors and homeowners are invited to use these protocols, but they must assume full responsibility for their use. Likewise manufacturers must assume full responsibility for the reliability of their products mentioned in this manual.

The authors of the individual protocols, the editor, the contributors and the International Institute for Bau-biologie® and Ecology (IBE) assume no responsibility or legal liability for the use of the protocols or products contained in this manual by builders, developers, architects, subcontractors, or homeowners.

In addition, the information presented in this manual gives general advice on those influences in the built environment that are known to be possible causes of illness. Always consult your health care provider for your individual health care needs and concerns. The information contained in this manual is presented for educational purposes only. It is not intended as a substitute for informed medical advice or care by a health care provider. You should not use this information to diagnose or treat any health problem or illness without consulting your health care provider.

Finally, it is important to note that while this manual is based upon a number of general principles of Building Biology®,¹ it is not an officially sanctioned publication of the International Institute for Bau-biologie® and Ecology. Rather it represents the collective experience as practicing building biologists of the authors and editor and those who have contributed to it, as recognized in the Acknowledgements. Aside from specific courses in the use of building materials presented in this manual taught by author George Swanson, those wishing to learn how to implement these and other healthy building practices should seek training through the IBE in Clearwater, Florida (www.buildingbiology.net).

¹ See [chapter 5](#), “The Basic Principles of Bau-Biologie.”
